PROFESSIONAL PROFILE

Full-Stack Developer with 3+ years of experience building and optimizing production-grade web applications using Java, Spring Boot, and Angular. Demonstrated ability to improve query response times by up to 30% through backend optimization and efficient database query design. Experienced in designing RESTful APIs, microservices architecture (Kafka, Quarkus), and integrating AI-powered features using LLM APIs (OpenAI, Claude) for both professional and personal projects. Proficient in PostgreSQL, Oracle, MongoDB, Docker, Kubernetes, and AWS. Strong track record of collaborating with clients, leading small development teams, and delivering business-oriented solutions. Actively seeking mid-level Full-Stack, Backend, or AI-integrated Software Engineering roles.

EXPERIENCE

Full-Stack Developer – Proyectos y Servicios RACO S.A.S

Nov 2022 – Feb 2026

Achievements & Responsibilities:

- Developed and maintained full-stack web applications using Java, Spring Boot, and Angular in production environments.
- Designed and implemented RESTful APIs to support business logic, integrations, and large-scale contract data processing.
- Integrated AI-powered conversational features using LLM APIs (OpenAI) to automate customer interactions and reduce manual support workload.
- Optimized contract search functionality, improving query response times by approximately 30%.
- Improved system performance and reduced errors through backend optimization, debugging, and database query improvements.
- Worked directly with clients to gather requirements and translate business needs into technical solutions.
- Managed relational and non-relational databases, including PostgreSQL, Oracle, and MongoDB, with focus on performance and consistency.
- Led development efforts within a small team, coordinating implementation tasks, reviewing code, and ensuring alignment in technical solutions.
- Applied clean architecture, modular design, Git-based version control, and maintainable coding practices.

PROJECTS

Smart Parking Management Platform

- Developed a real time smart parking system with space availability, vehicle plate tracking, reservations, and automated billing.
- Built event driven microservices using Quarkus, Apache Kafka, PostgreSQL, and Panache ORM.
- Designed RESTful APIs for parking spaces, reservations, billing records, revenue summaries, and sensor simulation.
- Created a responsive React 18 + Vite dashboard with live occupancy map, reservation modal, event feed, and billing panel.
- Implemented Docker Compose and Kubernetes Minikube deployment for a fully local, production-style environment.
- Added Swagger documentation, health checks, Prometheus metrics, and integration tests with JUnit 5 and RestAssured.

E-commerce Platform with AI Chatbot Integration

- Developed a full-stack e-commerce platform with product catalog, CRUD operations, and dynamic user interaction.
- Integrated a conversational chatbot to automate customer request handling and improve response efficiency.
- Implemented payment gateway integration to support secure online transactions.
- Built a notification system to enhance user engagement and real-time interaction.
- Designed and developed RESTful APIs using Spring Boot and Angular.
- Applied scalable architecture and performance optimization best practices.

EDUCATION

- **Higher Education:** B.Sc. Systems Engineering (8th Semester — Expected 2026) — Universidad El Bosque, Bogotá, Colombia
- **English:** Language Program — Level B2 — Instituto Colombo Americano, Bogotá, Colombia

TECHNICAL SKILLS

- Languages: Java, Python, JavaScript, HTML, CSS
- Backend: Spring Boot, REST APIs
- Frontend: Angular
- Databases: PostgreSQL, Oracle, MongoDB
- Cloud & DevOps: AWS, Docker, Docker Compose, Kubernetes, Virtual Machines
- Tools: Git, GitHub, Jira, ClickUp
- Methodologies: Scrum, Agile Development
- Other: Cisco Packet Tracer, Vensim
- Languages: Spanish (Native), English (B2)
- AI & LLMs: OpenAI, Anthropic, Hugging faces open models
